Embedded Firmware Engineer – Medical Devices

Description

A cutting-edge medical devices companies with a R&D facility in Cambridge are currently looking for experienced Embedded Firmware Engineers to work on the R&D and invention of brand new wireless medical technologies.

You will be working onsite, in Cambridge, developing hardware and embedded firmware. You will be mainly working in C and assembler while helping with the invention of new devices.

To have the skills required for this role it is expected that you would have worked within the medical devices sector on the development of wireless medical devices. We ideally want you to have worked on a number of successful medical technologies in the past but are open to other fields of wireless technologies.

If successful in this role you will be situated in a career that will continue to grow along with the business, so hopefully you will be career minded. You will also have an excellent starting salary and benefits package.

For more information please feel free to call Andrew Welsh, Director of Medical Devices recruitment specialists Newton Colmore Consulting, on 0121 268 2240 or make an application and one of our team at Newton Colmore Consulting will contact you.
