Lead Industrial Design Engineer

Description

A growing product design organisation are currently looking for a Lead Industrial Design Engineer to help with the creative design of brand new technologies. Based in Cambridgeshire, you will be leading the development of new products with the support of a team of industrial designers and human factors designers.

Apart from your support team, you will also work alongside physicists, mechanical engineers, electronics engineers and other highly skilled individuals who help with the invention of brand new cutting-edge technologies and products.

The projects you will work on will range across a number of different sectors including, but not limited to, medical devices, life sciences, oil & gas, consumer products, energy and other complex sectors. Ideally you will have worked on the design on a number of different products across a number of different sectors and have a portfolio you could share.

Due to the unique challenges you will face in this role, moving from sectors on a regular basis, I expect a lot of people to be interested in this role. So ideally you will already be working as a Lead Industrial Design Engineer or Lead Industrial Designer, however we are open to Senior Industrial Design Engineers or Senior Industrial Designers looking to take a step up in responsibility.

As you can imagine, it is expected you would hold a Product Design, Industrial Design or Human Factors Design degree along with a number of years of industry experience. If your work experience has been within a university environment instead, we may be interested if you were still working on commercial projects.

This is a challenging role that will improve your abilities on a daily basis. Apart from the work, there will be training available to continually develop your career, an excellent starting salary, benefits package and relocation allowance (when needed).

I expect a lot of interest in this role, so if you are looking for a challenging and developing role I suggest you make an application now.

For more information, please feel free to call Andrew Welsh, Director of Medical Devices recruitment specialists Newton Colmore Consulting, on +44 121 268 2240 or make an application and one of our team at Newton Colmore Consulting will contact you.
