Medical Devices Mechanical Engineer

Description

A growing medical devices company are currently looking for three Mechanical Engineers to help with the design and development of cutting edge medical devices. The technology you will work on will both save lives and improve lives around the globe.

Working with an experienced design team of industrial designers, human factors engineers, electronics engineers and physicists you will add the mechanical design knowledge needed to make sure this product is a success.

You will be joining a growing part of the business, meaning career progression is available for the right people. We need people who already have a successful track record on the design and development of Medical Devices, so we will not be able to look at people from alternative backgrounds.

Ideally you will have knowledge of electro-medical technologies, however this is not essential. As we are looking for three people we are open to people who have a couple of years experience through to a senior level mechanical engineer.

It is expected that you would hold a degree within an engineering, design or electronics field, however if you have designed electro-medical technologies you may not need the degree.

Apart from career progression you will be rewarded with an excellent starting salary and benefits package.

For more information, please feel free to call Andrew Welsh, Director of Medical Devices recruitment and Scientific recruitment specialists Newton Colmore Consulting, on 0121 268 2240 or make an application and one of our team at Newton Colmore Consulting will contact you.

Newton Colmore Consulting is a specialist recruitment company within the Medical Devices, Scientific Engineering, Scientific Software, Robotics, Science, Electronics Design, New Product Design, Human Factors, Regulatory Affairs, Quality Assurance and Field Service Engineering sectors.
