Medical Devices RF Engineer

Description

Due to the growth of a RF Technology company, specifically in Medical Devices and Healthcare, we are looking for a RF Engineer to join a company in Cambridge and help with the development of new life saving Medical Devices.

You will be designing RF Communications Systems specifically for the deployment within Medical Devices and Healthcare environments.

Working on electronics design, prototyping and testing of cutting-edge technologies that will work with a range of different Medical Devices. Due to this it would be ideal for you to already have Medical Devices experience to ISO 13485 standards, however we are open to other highly regulated fields such as automotive, transport, aerospace and defence.

This is a truly interesting role due to the complexities for RF Technologies within Healthcare not being able to mix with other RF or Wireless technologies. So, if you want to be tested daily, this is a great role for you.

It is expected that you would hold a degree within a relevant field, along with a number of years experience as a RF Engineer working on new designs.

Apart from a great starting salary and benefits package including pension, bonus, shares, life assurance and other excellent benefits.

Due to the interesting nature of this role, I'm expecting a lot of interest. If you are interested, make an application now or risk missing out.

For more information, please feel free to call Andrew Welsh, Director of Medical Devices recruitment and Scientific recruitment specialists Newton Colmore Consulting, on +44 121 268 2240 or make an application and one of our team at Newton Colmore Consulting will contact you.

Newton Colmore Consulting is a specialist recruitment company within the Medical Devices, Scientific Engineering, Scientific Software, Robotics, Data Science, Healthcare Communications, Science, Electronics Design, New Product Design, Human Factors, Regulatory Affairs, Quality Assurance and Field Service Engineering sectors.
