Quality Engineer – Medical Devices

Description

A medical devices company based in Cambridge are in the process of expanding and are actively looking to bring on board a Quality Engineer.

This company is developing an innovative medical device aimed at drastically improving people's lives and all of the team share this passion.

The role as Quality Engineer will give you the opportunity to work on market leading medical devices whilst working closely with fellow R&D Engineers, external consultants and suppliers to ensure the company's product remains potentially disruptive to its market.

You will be charged with authoring and reviewing plans, specifications for design, installation, operational and performance qualification. Other responsibilities include the planning and execution of supplier reports and audits and problem reports, all within ISO 13485 standards.

To be considered for the Quality Engineer role you will hold an engineering related degree whilst having previous quality experience within a medical devices environment, ideally working to ISO 13485 standards. The right candidate will ideally also have experience with hands on design of devices but this is not essential. Any additional experience with design history files is extremely advantageous.

In return for your hard work the company offer a highly competitive salary and benefits package as well providing excellent career progression opportunities and hands on training and company share options.

For more information contact Matthew Lowdon of Newton Colmore Consulting on 0121 268 2240.
