Software Engineer – Medical Devices R&D

Description

Newton Colmore Consulting are working with an exciting medical devices company in Cambridge, and we are helping them find software engineers to join their growing team.

As a Software Engineer you will be utilising your expertise and passion for software to program and code on a variety of different projects around technology and instruments that aim to improve clinical diagnostics capabilities. This will involve working at the intersection of engineering and biology on technologies such as microfluidics and machine vision.

Working on state-of-the-art instrumentation, you will be developing theoretical and experimental models and advanced simulations, prototyping, and testing your work for the full life cycle of the device.

To be considered for this role you will need to have experience with developing code in C++/C#, preferably with some understanding of embedded and mobile programming. This will be coupled with a strong passion for engineering and problem solving. Medical devices experience is advantageous, but we are considering engineers who have gained their experience in other industries.

In return for your hard work the company offer a highly competitive salary and benefits package as well providing excellent career progression opportunities and hands on training.

We will begin shortlisting candidates straight away for this role so make sure you do not miss out on this opportunity.

For more information contact Matthew Lowdon of Newton Colmore Consulting on 0121 268 2240.

To enter the recruitment process click apply now and if you have the right skills and expertise I will be in touch to discuss the opportunity further.

Newton Colmore Consulting is a specialist recruiter operating within the medical devices and biotechnology sectors. We have over ten years worth of expertise of placing candidates with our clients, globally. Our sole aim is to utilise this expertise and knowledge to maximise your chances of securing your ideal role with our clients. This is something we are deeply passionate about.
