Synthetic Chemistry Researcher – Biotechnology

Description

I am working with an exciting biotechnology instrument developer in Cambridge who are looking for a synthetic chemistry researcher to join their team.

This exciting new role will give the Synthetic Chemist an excellent opportunity to work on cutting edge products at the forefront of the sector.

As this is a relatively tight-knit team, you will need to take a hands-on approach and will be utilising your chemistry expertise to develop novel solutions to complex scientific problems alongside physicists, engineers, and scientists. This will include using your knowledge of reaction mechanisms and kinematics and a range of analytical and purification methods.

You will play a key role in developing novel and complex processes and designing test and validation programmes across chemistry, working closely with other scientists to ensure your findings are accurate and can be implemented efficiently.

Because of the nature of this company, you will always have new projects/products on the horizon meaning you will never be under-utilised.

To be considered for this exciting role you will need to have a degree in Synthetic Chemistry, Chemistry or other related subjects and have a thorough understanding of analytic techniques and characterisation and purification of organic molecules.

In exchange for your skills and expertise, the company offers a highly competitive package including relocation assistance and an exceptional personal training budget as well as providing excellent career progression.

For more information, make a confidential application now and a member of our team will be in touch with more details.

Newton Colmore Consulting is a highly specialist recruitment consultancy operating within the Medical Devices, Scientific Engineering, Scientific Software, Robotics, Science, Electronics Design, New Product Design, Human Factors, Regulatory Affairs, Quality Assurance and Field Service Engineering sectors throughout Europe and the US.
