## Mechanical Test Engineer – Medical Devices

### Description

A growing medical devices company in Cambridge are searching for an experienced research and development test engineer to join their in-house testing team.

As a Mechanical Test Engineer within this organisation, you will be utilising your experience to determine the performance and reliability of brand-new physical products within the medical devices sector.

You will be charged with building prototypes and designing and running experiments to gather performance data on new products as well as created novel test methods and protocols. You will be working closely with the laboratory manager to help push the team forward with new ideas.

It will be your role to ensure that exciting new breakthrough products can make the successful transition from initial concept to verification and manufacturing. This will be done by creating bespoke prototypes and testing programmes which will provide detailed data and insights that can be translated into real-world improvements.

To be considered for this role, we are ideally looking for a candidate who has the following;

- Experience and understanding of mechanical testing on physical products with knowledge of force testing equipment.
- Working knowledge of LabView or basic python programming experience.
- A methodical and structured approach to solving problems

The company are offering tailored packages for the right engineer which includes a series of benefits including performance bonuses, free lunches and breakfasts and a comprehensive pension plan.

If you would like to find out more about this opportunity, make an application now and one of our team will be in touch to discuss it further.
